

# Power of 4™ System

Combining state of the art EAS technology with advanced early detection tools, the USS Power of 4™ is a one-of-a-kind system allowing retailers to target everyday shoplifters along with professional Organized Retail Crime criminals all in one system. This unique, revolutionary system provides four levels of security and gives retailers advance notifications of ORC activity, allowing stores to be more proactive and help prevent heavy losses.

## Level 1 - Advanced EAS Technology

The Power of 4™ includes advanced Acousto-Magnetic (AM) technology designed to pick up all 58KHz AM tags and labels. In addition to its high pick rate, this system is also eco-friendly as it maintains a low emission rate.

## Level 2 - Booster Bag Detection

The Power of 4™ renders the booster bag a favorite tool of ORC criminals, useless. The system includes an early detection system that triggers an alarm when a booster bag is detected. Digital signatures of booster bags are programmed into the system which triggers the system as soon as a booster bag is within range. Once the booster bag is detected, the system alerts store personnel.

## Level 3 - Magnet Detector

This third level of security allows the Power of 4™ to detect when a magnetic detacher is brought into the store by criminals wishing to remove EAS tags from merchandise they are stealing. Like the booster bag detection, the system gives store personnel advanced warning when a magnet is within range.

## Level 3 - Magnet Detector

When professional criminals forego all the standard tools of the trade and move to more sophisticated means of deception, they are still no match for the Power of 4™ system. Anti-jamming EAS devices are now being used to stop EAS systems from alarming but the Power of 4™ is also equipped with an anti-jamming alarm circuit which makes these devices useless.

## Notification Options

The Power of 4™ can be programmed to alert employees in several ways, at the discretion of the retailer when an event occurs:

- A Voice Enunciator can be Activated
- Alarm can Sound by EAS Pedestals
- Systems can send a Notification via a Pager
- CCTV can be Triggered to Record at Higher Frames per Second and Time Stamp the Event

## Product Specs

- EAS Technology: AM or RF
- Dimensions: 61" H x 19.5" W x 4" D
- Supply Voltage: 100-120 VAC @ 60Hz
- Power: 150 Watts
- Two Pedestals: 6-12 ft. Coverage
